

Blossom & Browne's Sycamore ENVIRONMENTAL POLICY 2016

Blossom & Browne's Sycamore Laundry maintains a responsible attitude towards the environment and the impact of the business on it. This includes the safeguarding of existing environmental performance as well as being responsive to opportunities to maintain continual improvement. To help drive this, an Environmental Management System (EMS) certified to an ISO 14001 standard is in place. This provides a framework for establishing and reviewing annual targets and objectives.

In particular, the business is committed to:

- Remaining informed and aware of the life cycle or "cradle to the grave" attributes and implications of business commodities, products, packaging and equipment.
- Prevention of pollution implied through efficient working practices, good plant maintenance and correct process design and execution.
- Adopting a company transport strategy which minimises environmental impact as far as possible by efficient logistics, good vehicle maintenance and replacement schedules.
- Assessing the environmental implications and potential of products and investment decisions.
- Keeping up to date and ensuring compliance with all relevant requirements of environmental legislation, regulations and codes of practice.
- Considering environmental impacts and opportunities when choosing suppliers.

The company will liaise as required with the local community and authorities on environmental matters. This Environmental Policy is made available to all employees and the public.
