

Blossom & Browne's Sycamore ENVIRONMENTAL POLICY 2017

Blossom & Browne's Sycamore Laundry maintains a responsible attitude towards the environment and the impact of the business on it. This includes the safeguarding of existing environmental performance as well as being responsive to opportunities for continual improvement. To help drive this, an Environmental Management System (EMS) certified to an ISO 14001 standard is in place. This provides a framework for establishing and reviewing annual targets and objectives.

In particular, the business is committed to:

- Prevention of pollution implied through efficient working practices, good plant maintenance and correct process design and execution.
- Adopting a company transport strategy which minimises environmental impact as far as possible by efficient logistics, good vehicle maintenance, eco-driving policy and monitoring and replacement schedules with focus on ULEV vehicles.
- Adhering to our procurement procedures which specifically include assessing the environmental implications and potential of products purchased as well as efficiency and technological advances.
- Remaining informed and aware of the life cycle or "cradle to the grave" attributes and implications of business commodities, products, packaging and equipment.
- Keeping abreast of, and ensuring compliance with, all relevant requirements of environmental legislation, regulations and codes of practice.
- Considering environmental impacts and opportunities in all of our operations, including energy use, transport, waste disposal, water and chemicals.

The company will liaise as required with the local community and authorities on environmental matters. This Environmental Policy is made available to all employees and the public.
